STUDENT MEDIA

Abstract:

StudySnap - Student Social Media is a gamified academic social platform built for college students to boost engagement, simplify communication, and centralize study resources. Students register with a verified mobile number and choose a unique username; the mobile must be present on the device, similar to UPI-style verification. On first sign-up students complete a brief profile that appears on the Main Dashboard.

The platform motivates regular participation through study tokens and daily streaks earned by actions like ID-card scans, manual college attendance marking, daily logins/check-ins, quizzes, and study missions (coding challenges and games). Students can upload PDFs to an integrated E-Library, search and view materials, connect with classmates by username, and create study groups. Professors publish lecture videos on their profiles; uploads are subject to admin content moderation (approve/reject) to ensure academic relevance. A Notifications & Updates button placed at the top-right, beside the profile icon, delivers institutional messages.

The Admin Dashboard manages users and professors, maintains college and course lists used at student onboarding, and can add, update, or remove IDs. **StudySnap** focuses on simple, mobile-first verification, clear faculty-student content flows, and gamified incentives to turn routine academic actions into consistent, collaborative learning.

Modules

1. **Student Authentication & Profile Module:** Enables student registration using a mobile number with OTP verification and email for records. Students complete personal details and create a unique username to access and identify themselves on the platform.
2. **Daily Activity & Rewards Module:** Encourages consistent academic engagement through daily ID card scanning, manual attendance marking, and login streaks that reward students with study tokens.
3. **Missions, Quizzes & Study Challenges Module:** Provides interactive academic activities such as quizzes, coding challenges, study missions, and educational games that reward students with studyTokens and promote continuous learning.
4. **E-Library & Study Material Module:** Allows students to upload, access, download, and share study materials in PDF format through a centralized E-Library repository.
5. **Lecture Video Module:** Enables professors to upload lecture videos on their profiles for students to access. All videos are reviewed through admin moderation to ensure the content remains academic and study-related**.**
6. **Notifications & Updates Module:** Delivers important announcements, academic updates, and platform notifications through a centralized notification system available on the dashboard.
7. **Social & Group Interaction Module:** Allows students to connect with classmates using usernames and create groups for academic collaboration, communication, and study discussions.

8. **Admin Management Module:** Provides administrators with tools to manage users, maintain college and course lists, and approve or reject professor-uploaded lecture videos to ensure content quality.
